Gulnoza Mirkhalilova

Independent Researcher Of The Academy Of The Ministry Of Internal Affairs Of The Republic Of Uzbekistan

ABSTRACT

The article analyzes the sphere of Public Private Partnership on the example of foreign countries. Some aspects of the implementation of the PPPs in the public security system are described.

KEYWORDS

Public-private partnership, legislation in the field of Public Private Partnership, public security system, ensuring public security.

INTRODUCTION

In the conditions of today's rapidly advancing modern market economy, public-private partnership (PPP) is an effective means of economic and social development at the national and regional level, attracting funds to investment projects aimed at maintaining control by state and local government bodies and establishing effective economic cooperation with the private sector. and is a means of implementation. Today, we can see that public-private partnership (PPP) relations play a major role in the development of the country's economy, the effective implementation of large

infrastructure projects, and the improvement of social infrastructure in the country. In this regard, one of the important tasks is to study the experience of developing countries and introduce their practices to our country. In particular, it is especially important to study the experiences of the most developed countries of the world and other developed and developing countries regarding public-private partnership relations and directly introduce successful practices in this regard to our country. The main factors that can have a direct impact on the economic growth of our

country are the insufficient development of infrastructure sectors such as transport, energy, and communal services. Also, the lack of investments and the low level of involvement of modern technologies for the implementation of the necessary investment projects for the development and modernization of infrastructure facilities in these sectors are among the main problems. One of the most effective ways to solve such problems in world practice is the implementation of investment projects based on public-private partnership.

Although the PPP institute is widely used in most countries of the world today, there is no uniform definition of it in practice and in the scientific field.

For example, Russian scientist V.G. The definition provided by Varnavsky is noteworthy: "PPP is a variety of services strategic, institutional cooperation between the state and business for the implementation of socially significant projects and programs in the fields of scientific research"¹.

Legal scientist A. V. Belitskaya "public-private partnership between public and private business entities believes that mutually beneficial cooperation in relation to objects in the field of direct state interests and control"².

Economist K.A.Antonova describes "DDSH as an institution of cooperation between state and business entities on the basis of a contract."³.

E.V. Gorchakova notes that "PPP is a union of state agencies and private business, cooperation aimed at the development of service areas of social importance."⁴.

P. Snelson says that "FDI is the distribution of the benefits resulting from the implementation of economic activities as a result of cooperation between the state and the private sector"⁵.

E. Korovin's definition based on his research "PPP is a medium- or long-term cooperation between the public and private sectors, a beneficial cooperation of several sectors," he says"⁶.

M. Pazdnikov said that "PPP is a local tool of the western market economy where the state and business are partners. In addition, partners are equal. Therefore, the term "public-private partnership" is used"⁷.

In particular, one of our national researchers, U.I. Djumaniyazov "DDS is an extremely socio-economic development for the population with the private sector based on the distribution of various economic,

political, social, cultural and other risks, dangers, risks that may arise based on the long-term strategic tasks and goals of the state within the framework of the current laws, if necessary, to build politically important objects or to provide social services in this context, it is defined as literally mutually beneficial relations with the private sector⁸.

Also according to the laws of developed countries it can be seen that the following legal definitions have been given to public-private partnership: For example, a public-private partnership in the United States is a type of agreement between the state and a private company in an agreed form that allows participation in public property and the performance of the functions of public authorities"⁹. Such a contract usually refers to an agreement between the government and a private company, the subject of which will be related to the reconstruction, construction, operation and management of a public facility. The main property rights in relation to this object will not change and the state will remain the owner even after the object is transferred to a private company. The term public-private partnership describes a wide range of relationships, from contracts in which a private company assumes certain risks to complex, technically complex projects involving the construction,

modernization, operation and management of facilities.

In the European Union, the term PPP is considered as "a form of cooperation between state bodies and enterprises that serves the financing, construction, modernization, management, efficient use of infrastructure of state bodies or provision of services"¹⁰.

In Germany, PPP in most cases is "a long-term cooperation between public authorities and the private sector of the economy on the one hand, and resources necessary for mutual benefit on the other (for example, know-how, means of production, capital, personnel, etc.)"¹¹

In particular, there is a legal framework that classifies this concept in our country. Law "On Public-Private Partnership of the Republic of Uzbekistan" adopted on May 10, 2019 Article 3 states that "PPP is a state partner (state administration and local executive authorities, as well as other authorized legal entities) and a private partner (an individual entrepreneur, legal entity, or association of legal entities that has concluded a public-private partnership agreement with a state partner) defined as "cooperation based on pooling of resources to solve economic, social and infrastructural tasks for a certain period of time".¹²

Ensuring public order and security in each country is defined as a strategic task. Before the concept of providing public safety on the basis of public-private partnership, it is necessary to answer the question of what "public safety system" is.

As noted by our legal scholars M.Kh. Baratov and N.A. Kuldashv "Ensuring public safety is a comprehensive system, which includes political, socio-economic, legal and other complex organizational measures established by the state to protect society from threats, which are constantly being improved"¹³.

Russian scientist A. A. Karmolitskiy considers "public security as a system of relations and it develops in the process of preventing and eliminating threats to human life and health."¹⁴.

A.A. Nikolaev believes that "in a state where public peace, personal integrity, and integrity of property are maintained, all relationships will be healthy."¹⁵

If we look at the experience of foreign countries, we can find different types of sectors based on public-private partnership in the provision of public security. For example, the English police system has introduced an approach called the "extended police family" based on public-private partnerships to improve efficiency in the investigation of crimes.¹⁶

This method later led to the passing of the Crime and Disorder Control Act in 1998 and the effective provision of public safety.

Of course, public safety must be ensured in all spheres of social life. By combining the capabilities of the state, investors and entrepreneurs, this sector can be brought to a qualitatively higher level. Countries with strong economies also widely use PPP to ensure public safety.

In conclusion, it is very important to properly organize the provision of the public security system in our country on the basis of public-private partnership and to define future plans for the development of this sector.
